

Service Design

Community Supports Model
For People With Dementia

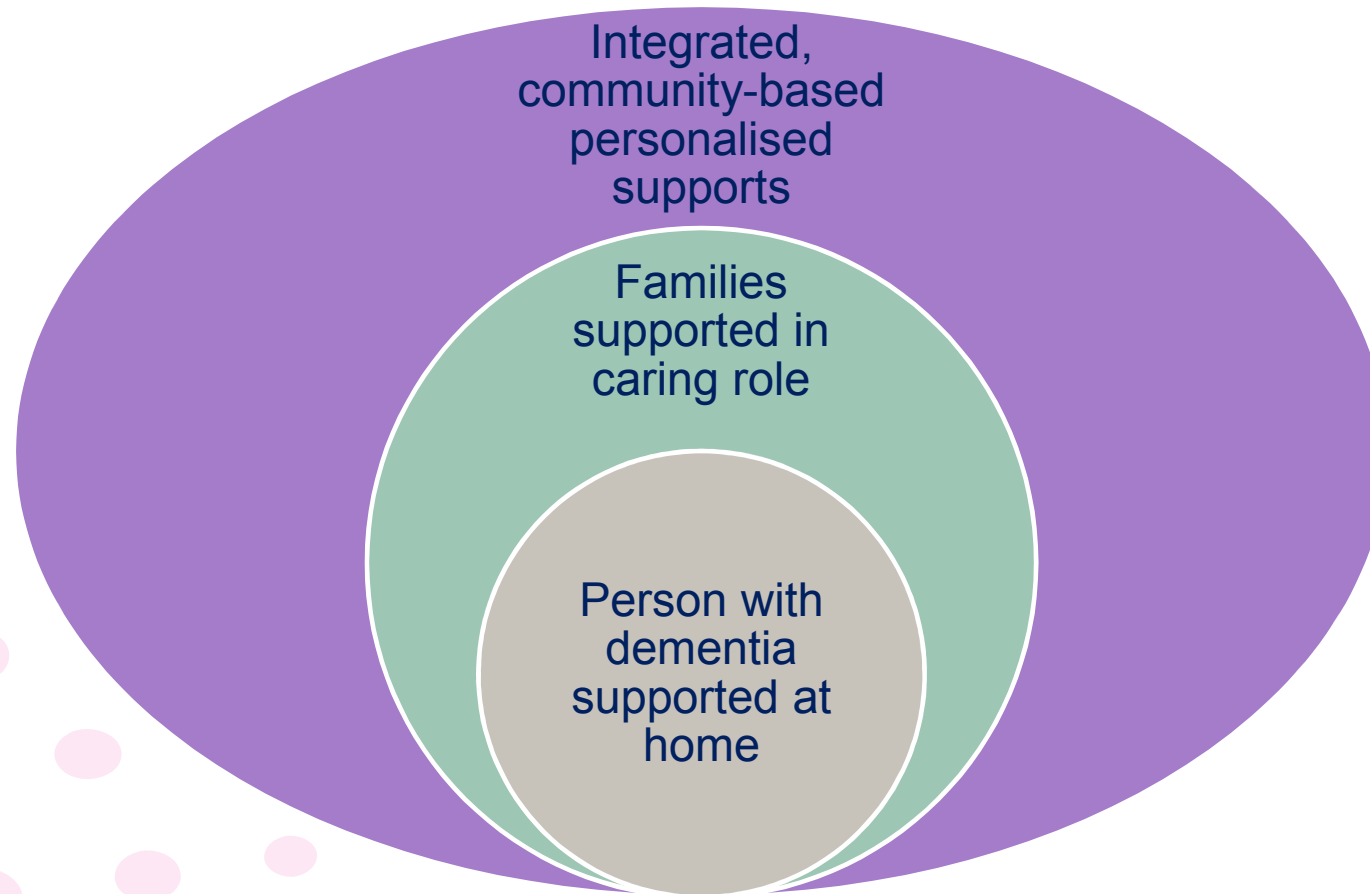

Community Action
on **Dementia** in Mayo

Living
Well with
Dementia

Stil organ - Blackrock

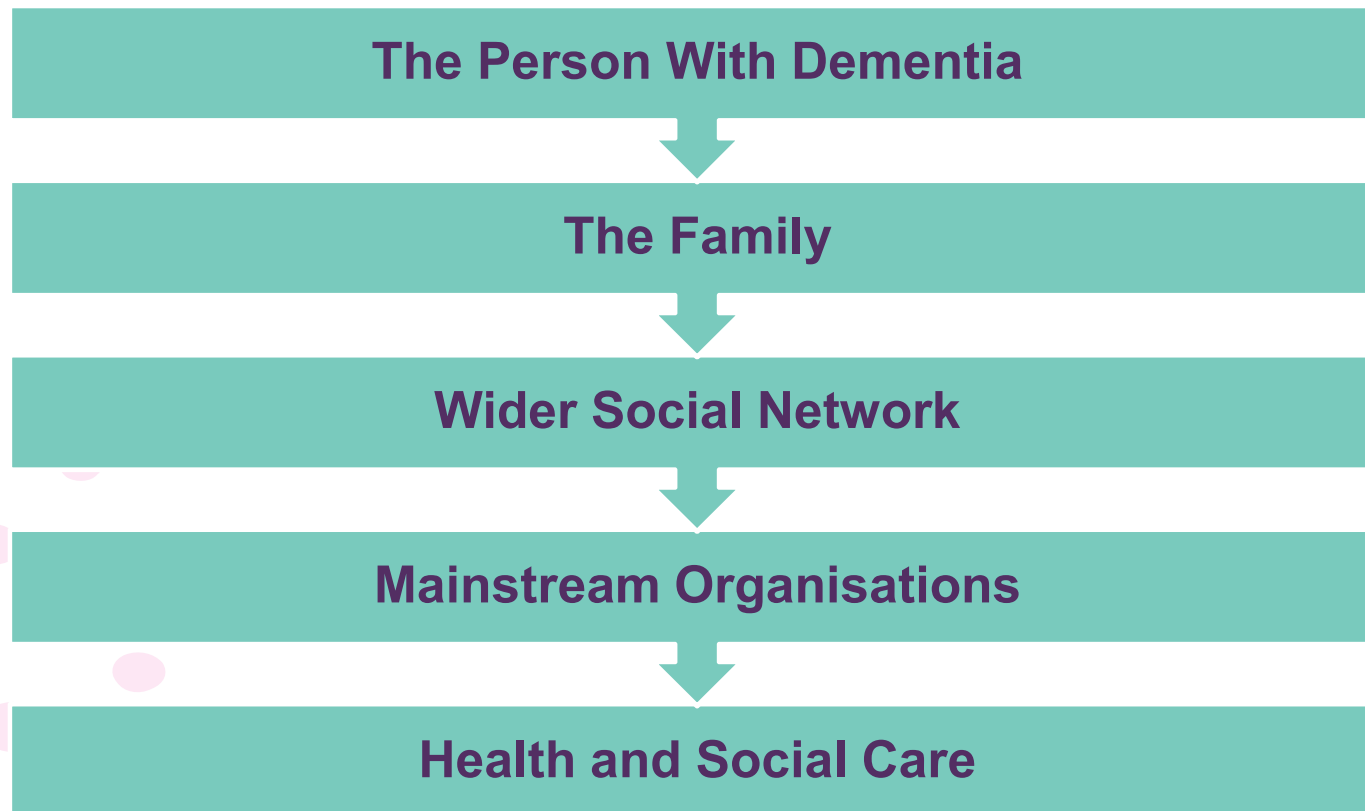

Vision - Aim of the programme

Some core considerations in making personalised supports real:

- Person with dementia and carer 'design their own supports'.
- A '**normalising**' approach to dementia.
- Focused on maintaining roles, building on strengths, existing capacities and life history, moving away from an exclusive focus on deficits.
- Uses naturally occurring family and community supports, then mainstream services and finally formal health and social care supports to fill identified gaps – the concept of a **care and support ecosystem**.

Care and support 'ecosystem'

Some outputs and outcomes

- Four consortia with approximately 80 members
- 809 people with dementia – 42,000 hours+ of personalised supports
- 181 people delayed from entering LTC
- 1,000+ Health and social care workers accessed training and education
- 4,500 members of public reached with information
- Memory technology libraries developed and 40 telecare packages implemented

Service design process

Input of national/international expert panel

**Workshops with 4 sites:
Kinsale, South Tipperary, Mayo
and Stillorgan/Blackrock**

**Focus group with
people with
dementia**

**Workshop with 5 sites
supporting people with more
complex needs**

**Workshop with HSE
representatives partnering on
the delivery of these projects**

Aim of service design process

To produce a comprehensive, evidence and practice based model drawing on the most effective elements of the innovations across the four sites.
